

RAG Retrieval – API

Query preprocessing

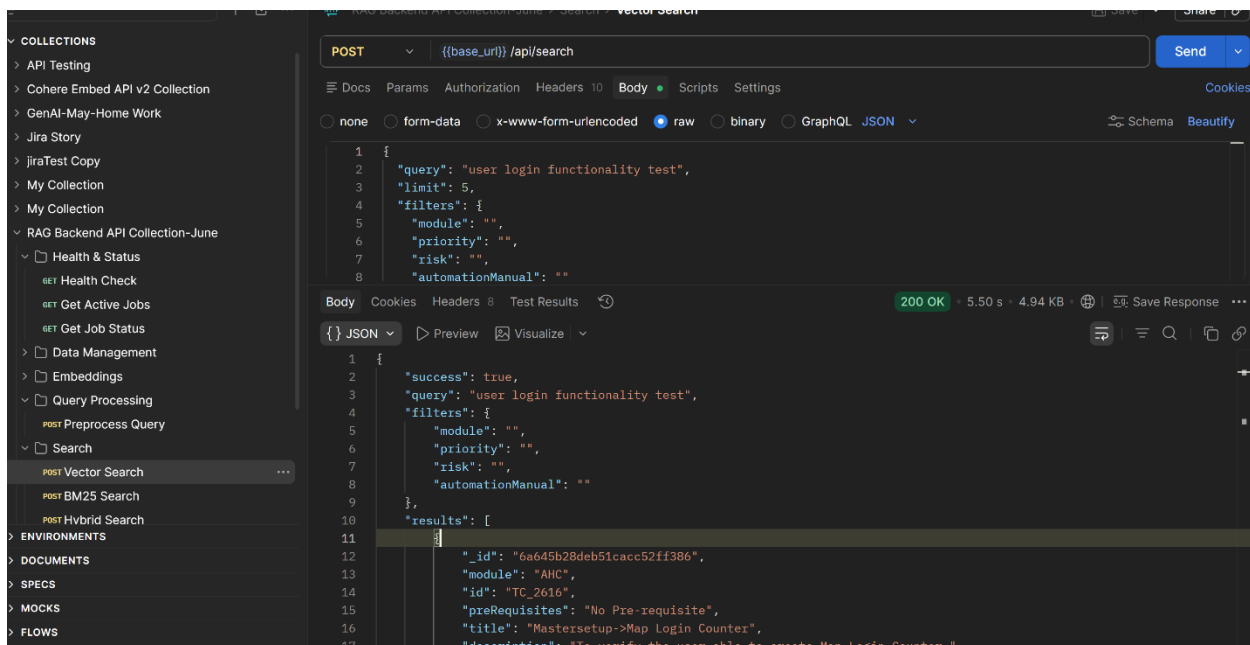

The screenshot shows a REST client interface with a sidebar on the left listing collections. The main panel displays a POST request to `{{base_url}}/api/search/preprocess`. The request body is a JSON object:

```
1 {
2   "query": "password reset OTP verification",
3   "options": {
4     "enableAbbreviations": true,
5     "enableSynonyms": true,
6     "maxSynonymVariations": 5,
7     "customAbbreviations": {},
8     "customSynonyms": {},
9     "smartExpansion": false,
10    "preserveTestCaseIds": true
11  }
12 }
```

The response is a 200 OK status with a JSON body:

```
1 {
2   "original": "password reset OTP verification",
3   "normalized": "password reset otp verification",
4   "abbreviationExpanded": "password reset one time password verification",
5   "synonymExpanded": [
6     "password reset one time password verification",
7     "credential reset one time password verification",
8     "passphrase reset one time password verification",
9     "passcode reset one time password verification",
10    "password change one time password verification"
11  ],
12   "metadata": {
13     "testCaseIds": []
14   }
15 }
```

Vector Search

The screenshot shows a REST client interface with a sidebar on the left listing collections. The main panel displays a POST request to `{{base_url}}/api/search`. The request body is a JSON object:

```
1 {
2   "query": "user login functionality test",
3   "limit": 5,
4   "filters": {
5     "module": "",
6     "priority": "",
7     "risk": "",
8     "automationManual": ""
9   }
10 }
```

The response is a 200 OK status with a JSON body:

```
1 {
2   "success": true,
3   "query": "user login functionality test",
4   "filters": {
5     "module": "",
6     "priority": "",
7     "risk": "",
8     "automationManual": ""
9   },
10  "results": [
11    {
12      "_id": "6a645b28deb51cacc52ff386",
13      "module": "AHC",
14      "id": "TC_2616",
15      "preRequisites": "No Pre-requisite",
16      "title": "Mastersetup->Map Login Counter",
17      "description": "To verify the user able to create Map Login Counter."
18    }
19  ]
20 }
```

BM25 search:

The screenshot displays the Postman interface for a REST client. The left sidebar shows a collection named 'RAG Backend API Collection-June' with a sub-collection 'Search'. The 'BM25 Search' endpoint is selected, showing a POST request to `{{base_url}} /api/search/bm25`. The response is a 200 OK status with a JSON body. The JSON body contains a success flag, search type, query, filters, and a list of results. The results list includes a single entry with an ID, module, title, description, steps, expected results, and an automated status.

POST `{{base_url}} /api/search/bm25`
