Rows: 7 | Columns: 6

#	query	output	context	expected_output	Metrics
1	What is Selenium?	Selenium is a web automation framework for testing web applications.	Selenium is an open-source tool for automating web browsers, mainly used for testing web applications.	Selenium is an open-source framework for automating web browser interactions, primarily used for testing web applications.	faithfulness
2	What is Appium used for?	Appium is a tool for automating native, hybrid, and mobile web applications.	Appium is an open-source test automation framework for use with native, hybrid, and mobile web apps.		answer_relevancy
3	What is TestNG?	TestNG is a testing framework inspired by JUnit, designed for a broad range of test categories.	TestNG is a testing framework designed to simplify a broad range of testing needs, from unit testing to integration testing.	TestNG is a testing framework for Java that covers unit, functional, end-to-end, and integration testing.	contextual_precision

```
"query": "What is TestNG?",  
"output": "TestNG is a testing framework inspired by JUnit, designed for a broad range of test categories.",  
"context": "TestNG is a testing framework designed to simplify a broad range of testing needs, from unit testing to integration testing.",  
"expected_output": "TestNG is a testing framework for Java that covers unit, functional, end-to-end, and integration testing."
```

This JSON is ready to be used for batch evaluation in Step 3

 **Evaluation Metrics from Excel**

The "Metrics" column in your Excel file will be used for each row's evaluation. Each row can have a different metric (faithfulness, answer_relevancy, etc.). Rows with NA or missing metric values will use `answer_relevancy` as default.

Running Evaluation...

Click to evaluate all 7 records using metrics from the "Metrics" column

 **Progress**

Step 1: Upload and preview Excel file

Step 2: Convert to JSON with formatting options

Step 3: Run batch evaluation on the datasets

4 Generate HTML and Excel reports with scores
